

CLAIMS

What is claimed is:

- 1 1. Computer equipment having a monitor unit provided with a display screen and a
2 main unit including a control section for controlling said display screen,
3 comprising:
4 an arm for supporting said monitor unit relative to said main unit;
5 a first hinge for rotatably connecting said monitor unit to said arm; and
6 a second hinge for rotatably connecting said main unit to said arm.
- 1 2. The apparatus according to Claim 1, wherein an angle, between said first and second
2 hinges, is set with respect to a predetermined angle between said main unit and
3 said monitor unit.
- 1 3. The apparatus according to Claim 1, wherein said main unit has a concave portion for
2 storing said arm.
- 1 4. The apparatus according to Claim 3, wherein said concave portion is formed at a part
2 in a width direction of said computer.
- 1 5. Computer equipment which is connectable with a monitor unit and portable,
2 comprising:
3 a concave portion capable of storing an arm which is rotatably connected to
4 said monitor unit; and
5 a connector connectable with an image signal interface cable extending from
6 said monitor unit, which is provided in said concave portion.

1 6. The apparatus according to Claim 5, further comprising a connector connectable with
2 a data communication interface extending from said monitor unit, which is
3 provided in said concave portion.

1 7. The apparatus according to Claim 5, further comprising a detachable input section
2 which receives data input.

1 8. Computer equipment which is portable by being folded, comprising:
2 a monitor for displaying an image;
3 a main unit which stores an arithmetic section for processing said image; and
4
5 a support portion for connecting said monitor to said main unit,
6 wherein said support portion is capable of adjusting a distance between said monitor and
7 said main unit and an angle of said monitor with respect to said main unit.

1 9. The computer equipment according to Claim 8,
2 wherein said support portion connected to said monitor is detachable from said main unit.

1 10. The computer equipment according to Claim 8, further comprising:
2 a first angle adjusting unit interposed between said support portion and said main unit;
3 and a second angle adjusting unit interposed between said support portion and said
4 monitor.

1 11. The computer equipment according to Claim 10,
2 wherein said second angle adjusting unit functions as an opening/closing hinge when
3 said computer equipment is folded.

1 12. The computer equipment according to Claim 8, further comprising, an input
2 section for receiving data input, wherein said input section is connected to said main unit
3 so that a distance between said input section and said main unit is variable.

1 13. A monitor unit connectable to a main unit of computer equipment, comprising:
2 a monitor body provided with a display screen; and an arm extending from said monitor
3 body, wherein said arm has an interface function capable of being connected to said main
4 unit to send an image signal to said monitor body; and a plurality of rotatable hinges.

1 14. The monitor unit according to Claim 13, wherein at least one of said hinges
2 connects one end of said arm to said main unit.

1 15. The monitor unit according to Claim 13, further comprising a setting base which
2 detachably accommodates said arm, wherein said setting base comprises a connector
3 which receives a cable provided with said interface function; and a cable extending
4 from said connector so as to be connectable to a desktop type computer equipment.

1 16. The monitor unit according to Claim 13, wherein said monitor body is further
2 provided with a radio communication antenna.

1 17. A monitor unit connectable to a main unit of computer equipment, comprising: a
2 monitor body provided with a display screen; an arm for supporting said monitor
3 body when said monitor unit is connected to said main unit; and a base connectable
4 to said main unit, wherein said arm is connected to said base by a rotatable hinge.

1 18. The monitor unit according to Claim 17, wherein said arm is connected to said monitor
2 body by a rotatable hinge.

1 19. A monitor unit setting base for connecting a monitor unit connectable to a notebook
2 type PC (Personal Computer) to a desktop type PC in place of said notebook type PC,
3 comprising: a receiving portion capable of receiving an arm extending from said monitor
4 unit; and a connector capable of receiving an image signal interface cable extending from
5 said monitor unit, which is provided in said receiving portion.

1 20. A computer having a monitor unit provided with a display screen and a main
2 processing unit including a control section for controlling said display screen, comprising:
3 an arm for supporting said monitor unit relative to said main unit;
4 a first hinge for rotatably connecting said monitor unit to said arm; and
5 a second hinge for rotatably connecting said main unit to said arm,
6 wherein an angle, between said first and second hinges, is set with respect
7 to a predetermined angle between said main unit and said monitor unit,
8 and wherein said main unit has a concave portion for storing said arm.
